Scope of work for repairing of condensers

There are total 09 evaporative condensers installed at our refrigeration plant of Evapco make Model CATC-462. There are three sections of condensers. The uppermost section of condenser is Fan section. In that Fan section we need to replace all the panels supports, base with new materials.

The existing material MOC is GI panel and supports. We require replacing the GI panels & supports with SS316/SS 304 panels & supports of top section. Remaining two section keep as it is. We need to provide new SS panels on existing GI panels with providing rubber gasket in between all the joints to reduce the two different metal contact. Also wherever two different metal will joined with bolts, all the bolts are specially coated either with zinc or electrolyte to reduce the two different metal erosion. All other same metal fasteners are of the same metal.

In the upper most section we keep the fan assembly, drift eliminator, spray nozzle, spray pipe headers, condenser motor, motor base, base sheet as it is. All other panels, supports, pipe supports are need to replace with new one.

The scope is from dismantling the complete assembly with new parts and some of the mentioned above existing part with correct assembly.

Below scope of work for eight number of condensers.

Site visit for the said work is must before bidding.
